

OFF-VEHICLE FILTER CLEANER

DPF CLEANING STATION

What is the Standard CombiClean?

The Standard CombiClean is a simplified unit process of heat, air, and vacuum with minimal operator input to clean your passive, active, cordierite, and silicon carbide filters. It requires an eight hour regeneration time for all filter types, and allows for slow temperature increase and continuous air supply to prevent damage. It has an OSHA safety red containment cage to warn those nearby of heat and is proven to be the most economical, safe, and environmentally friendly way of cleaning your filter.

What is the Automated CombiClean?

The Automated CombiClean is a fully automated process of heat, air, and vacuum without operating handling, which has temperature sensing and programming abilities to prevent filter damage or damage to the catalytic coating of the filter. The Automated CombiClean is digitally programmed with touch pad and LED display of progress fault codes and requires 3-hour regeneration time for silicon carbide and cordierite filters.
